

OMNIBUS III

Universal Consulting Services—Omnibus III prime contractor—provides personnel and process infrastructure support to conduct research and development.

Omnibus III: Team UCS

Our real world experience in the DoD medical field enables our team to bridge the gap between academic research and the military healthcare operating environment.

Who is Team UCS?

We have a proven track record managing military healthcare projects and employing highly-educated DoD medical professionals and staff in support of Omnibus III. With our experience and these resources, we provide subject-matter expertise and technical support in the medical R&D field.

Our scientists have experience working on the frontlines of research in areas that are crucial to military health treatment and management. This scientific expertise gives us a firm command of technical requirements, allowing us to accurately select the right experts for the task. UCS is partnered with Alion Science and Technology and PricewaterhouseCoopers to provide the Government a specialized, fully operational team.

What is OMNIBUS III?

While the over-arching mission is to establish an enterprise-wide infrastructure for R&D, Omnibus III is sub-divided into specific task orders and process infrastructure. Navy Medicine is developing a conventional process for maturation of research into the treatment facility via protocols, clinical trials, and FDA related applications such as those available by way of a Contract Research Organization. These initiatives intend to contribute to accelerating and strengthening clinical research by adopting a systematic process infrastructure that will better serve the evolving field of scientific discovery.

Why OMNIBUS III?

This contracting vehicle provides the military services including Navy, Army, Air Force as well as NATO with the flexibility and diversity of multiple task areas:

- Behavioral Sciences & Epidemiology
- Clinical Investigation Program
- Deployment Health Research
- Environmental Health Effects
- Medical, Simulation, and Mission Support
- Etiological Research
- Warfighter Performance
- Clinical Outcomes Assessment
- Clinical Research Policy and Analysis
- Clinical Research Networks
- Clinical Research Training
- Translational Research
